

DAIRY RANGE

Veanavite® Calf Pellets

Veanavite® Calf Pellets are a nutritionally balanced, high energy and protein ration designed to be fed to calves from 1 week to 10-12 weeks of age.

Features	Benefits
Nutritionally balanced ration	> Meets the demands of growing calves
22% protein ration	> High protein level for early calf development
Veanavite® vitamin/trace mineral premix	> Provides essential vitamins and minerals to meet nutritional demands of growth
Promotes early rumen development	> Early weaning onto pasture
Sodium bicarbonate	> Buffer to increase rumen pH and promote rumen development
Molasses added	> Increases palatability and feed intake
Raw material receival standards	> High quality and safety of ingredients

NUTRITIONAL ANALYSIS

Nutrients	Dry matter basis
Crude Protein (min)	22.0%
Metabolisable Energy (est)	12.0 MJ/kg
Added Salt (max)	0.20%
Calcium (min)	0.75%
Phosphorus (min)	0.5%
Urea (max)	1.0%

INGREDIENT SELECTION

Lupins, barley, oats, wheat, triticale, cereal byproducts, canolameal, limesand, dicalcium phosphate, molasses, urea, salt, sodium bicarbonate, Veanavite® vitamin/trace mineral premix.

FEEDING DIRECTIONS

Veanavite® Calf Pellets should be available *ad lib* to calves from 3 days of age until 4-5 weeks after weaning. They should be fed in conjunction with clean straw and water.

Milk or milk replacers should be fed to calves until the calf is consuming 0.75 - 1.0 kg of pellets per day.
